

BORUM MANUAL SCREED BOXES

The right solution and machinery depends on the volume and type of upcoming jobs. For smaller manual jobs and areas with limited spaces, Borum is offering a flexible and easy to use solution.

The Borum manual screed boxes can be used for handling manual extrusion jobs with thermoplastic material (E.g. parking lots, repair and maintenance, STOP lines, ZEBRA crossings, etc.). Besides being straightforward to use, the Borum manual screed boxes also ensure that no time is wasted on loading and unloading.

The Borum manual screed boxes can be used for marking one line up to 24 inch or a double line of 4 inch in one run. The thickness of the line can be from 0.06 to 0.2 inch. Antiskid material can be pre-mixed in order to make the markings less slippery.

STANDARD US SIZES

Manual screed box 4 inch
(Volume approx. 18 lb)

Manual screed box 6 inch
(Volume approx. 26 lb)
