

**LINE MARKING MACHINES
FOR EVERY REQUIREMENT**

**Runway / Airfield
marking machines**

– it's straightforward

It pays to drive a Borum!

Excellence all over the world

Efficient marking of runways, taxi-ways and other parts of an airport requires user-friendly, robust, high-performance machines.

Danish company Borum, one of the world's leading line marking machine and equipment manufacturers, has supplied machines for marking in airports for many years.

Professionalism, safety and operating reliability of the equipment are key words when it comes to the work process, as the marking areas often have to be closed while the work is carried out.

The capacity and efficiency of the machine are also key factors, since the characteristics of most airport marking is the need to mark large areas.

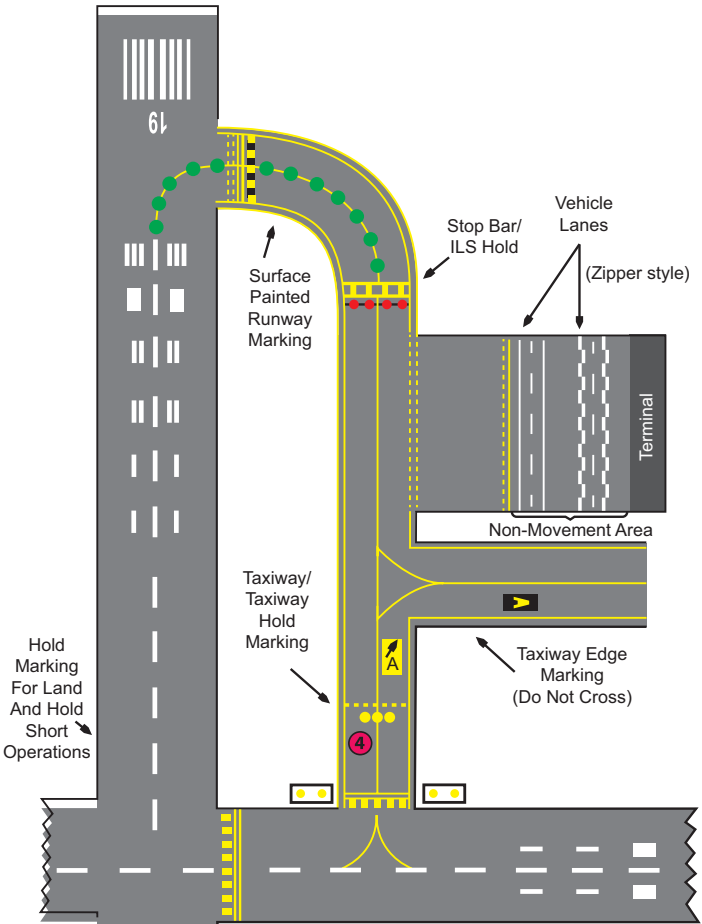

Naturally Borum has machines available to accommodate all above requirements.

Choosing your line marking machine

When choosing your airport line marking machine you should take the below-mentioned needs into consideration:

- The need for different markings throughout the airport.
- The need for different colours of the markings, often applied at the same time.
- The need for different sizes of the lines, depending on their function, including very wide lines in special areas.
- The need for a computer system on the machine to assist the operator with automatically laying out the predefined lines.

Dedication is in our DNA

No matter what material or line type you choose, marking with a Borum machine is easy and straightforward.

Borum is your guarantee for durable equipment, maximum uptime and profit – an excellent investment!

Borum is dedicated to developing exceptionally robust and reliable line marking machines that require minimal maintenance and repairs.

By choosing Borum as your supplier you have a future-proof access to spare parts and product servicing.

In case you have any questions about your machine, Borum has got a global network of sales staff and service technicians, ready to help you.
